

## Packmaster

*Semi-automated bagging and clipband closing machine for various bread types*

Ipeka Packmaster is a versatile packaging machine for different types of bread products, recommended especially for sliced bread and oval shaped loaves\*. The equipment includes one or two bag opening air flow tables, stepping band conveyor and clipband closing unit. The two table model enables one or two operators.

(\*for Pita bread or other round products we recommend Ipeka CL-35 bagging machine)

Operator pushes bread into a pre-opened bag and continues to band conveyor. Conveyor moves forward step-by-step to the clip-closing station and after forming the closure, ready bag continues for example to a rotating collection table. In two operator use it's able to reach capacity up to 40-45 bags per minute, whereas a single operator can do some 25-30 bags per minute. The capacity depends also on the type of bread.

Ipeka delivers also complete slicing and bagging lines. Our Masterslicers can offer you the most efficient alternative for slicing of white or dark bread. Packmaster is designed to easily combine with a Masterslicer. We also supply high quality clipband material.

*Bag pre-opening with air blow*

*Double-crested conveyor belt*

*Brush tightening and air vacuum*

*Clipband closing*

*Date marking device available  
Omron PLC control  
Yaskawa frequency converters  
SMC pneumatics*

*Complete the line with a rotating table*
