

MasterSlicer 1W

Band blade slicer for industrial capacity bread slicing

Ipeka Masterslicer 1W is an industrial, high-capacity bandslicer for white or multigrain bread. The band blades are tightened between two hard chrome-coated steel drums. With the hard alloy blade guides and long-lasting blades, the slices are cut straight and the thickness of the slices always remains exact.

Masterslicer 1W is equipped with an adjustable infeed system with driven bottom, side and top belts. Such a well controlled feeding is ideal for a wide variety of products, especially when free-baked products are concerned.

Bread is fed to the machine directly from the cooling system or manually to the infeed conveyor. The height-adjustable outfeed conveyor is equipped with revolving bars to carry the sliced products to a fully automatic packaging machine like Ipeka Loafmaster.

For semi-automated slicing and bagging process the slicer will be equipped with a band conveyor outlet. Masterslicer 1W together with the Ipeka Packmaster bagging and clipband closing machine provide a cost-effective, semi-automatic solution for the production of free-baked sliced bread.
